

COMfortel® Mobile Business

FMC application for mobile use of your business calling number

- Access to the ICT system's telephone book
- Seamless integration into iOS and Android operating systems
- Signal the business phone number
- Full flexibility – switch availability by using the Auerswald API
- Voice control by using Apple's voice assistant, Siri

Your advantages in detail

The FMC smartphone app COMfortel Mobile Business enables users to make phone calls in the mobile phone network using their business landline number, regardless of their location. With this BYOD (Bring Your Own Device) solution, employees who frequently travel for business are easier to be contacted and can work flexibly.

Privacy guaranteed: the private smartphone phone number is always protected and is not transmitted to the conversational partner. Furthermore, the tele-

phone book in the ICT system can be retrieved by using a smartphone.

iPhone integration: the CallKit interface integrates seamlessly with Apple's iOS. Additionally, calls can also be initiated via Apple's voice assistant, Siri. Incoming and outgoing calls made with the landline number always appear in the mobile phone's regular caller list.

You can obtain COMfortel Mobile Business directly in the [Apple® App Store](#) or at [Google Play](#).
