

COMtrexx Flex GbE- NET-Module

Extension for COMtrexx Flex with a second Ethernet interface

- Ethernet interface with separate IP address range
- Improved security for VoIP telephony
- Separation of VoIP telephony and data

Your advantages in detail

The ITC system COMtrexx Flex can be expanded with a second Ethernet interface by using the COMtrexx Flex GbE-NET-Module. With this expansion it is possible to support separate IP address ranges for VoIP. This

provides significantly higher security for communication via IP. Additionally, it is possible to realise the separation of telephony and data traffic in different IP address ranges.

Features at a glance
