

DATASHEET

PBX Manager

Application to control and configure an Auerswald ICT system

- Multi-accounting – several accounts in one app
- Switch call forwarding
- Log in/out in groups via the smartphone
- Retrieve fax messages
- Play back voicemail messages

If you want to conveniently check the status of your Auerswald ICT system and control vital functions – from your home or on the go – take our smartphone app PBX Manager.

It's designed both for Apple® iOS and Google Android™, and it lets you see right away if a caller has tried to reach you over your extension, left a message or sent you a fax. In case you forgot to activate the call diversion to your mobile phone or to set the ICT system on weekend operation, simply do it from wherever you happen to be! All it takes to use PBX Manager is that your Auerswald ICT system is part of your network and connected with the Internet.

You can obtain PBX Manager (formerly known as PBX Control) directly in the Apple® App Store or at Google Play. There's no need to install any further software on your home or office PC because this app communicates directly with your ICT system.
